

Precise™ Sound - absorbing Surface Material

Precise™

A multi-functional non-woven fabric which has a fine fiber layer.

“Precise™” is a multifunctional nonwoven fabric which has a fine fiber layer.

1 Challenge

- ① The sound-absorbing performance isn't enough.
- ② Current acoustic materials are heavy and thick.
- ③ A sound-absorbing frequency isn't suitable.

2 Insight

Precise™ is multiplied to current acoustic materials such as felts and urethanes etc.

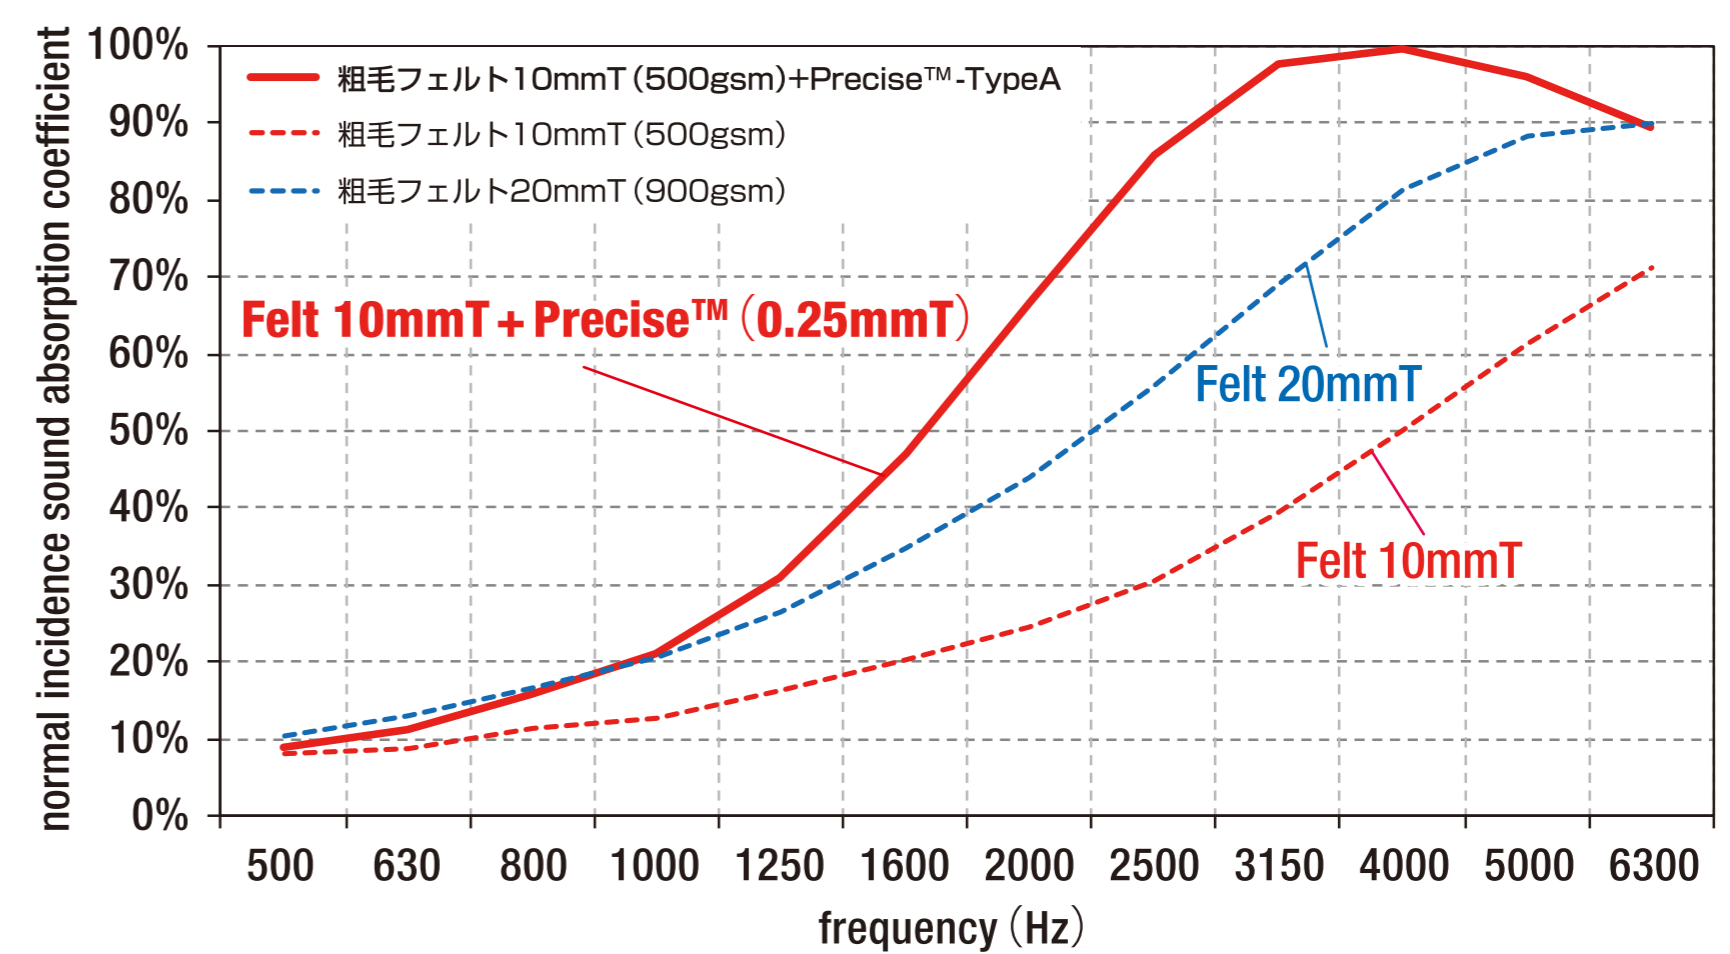

3 Result

- ① It's possible to improve sound absorptivity.
- ② It can make acoustic materials thinner and lighter.
- ③ A sound-absorbing frequency can be controlled.

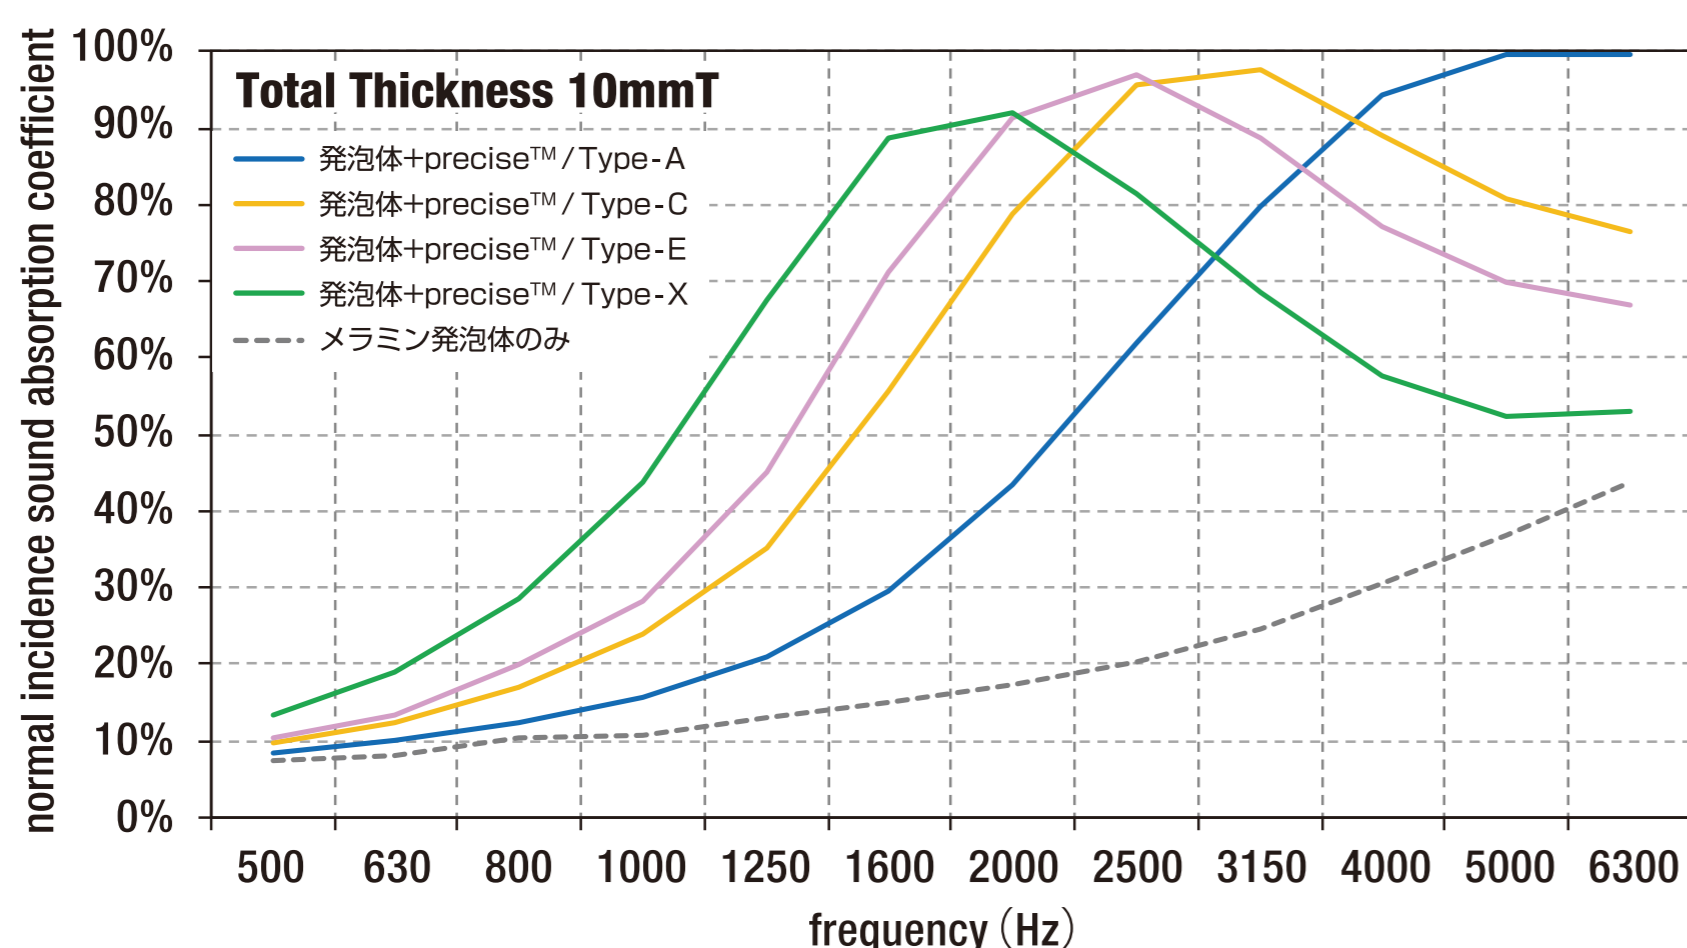

Product Features

1 The sound absorbing performance is improved.

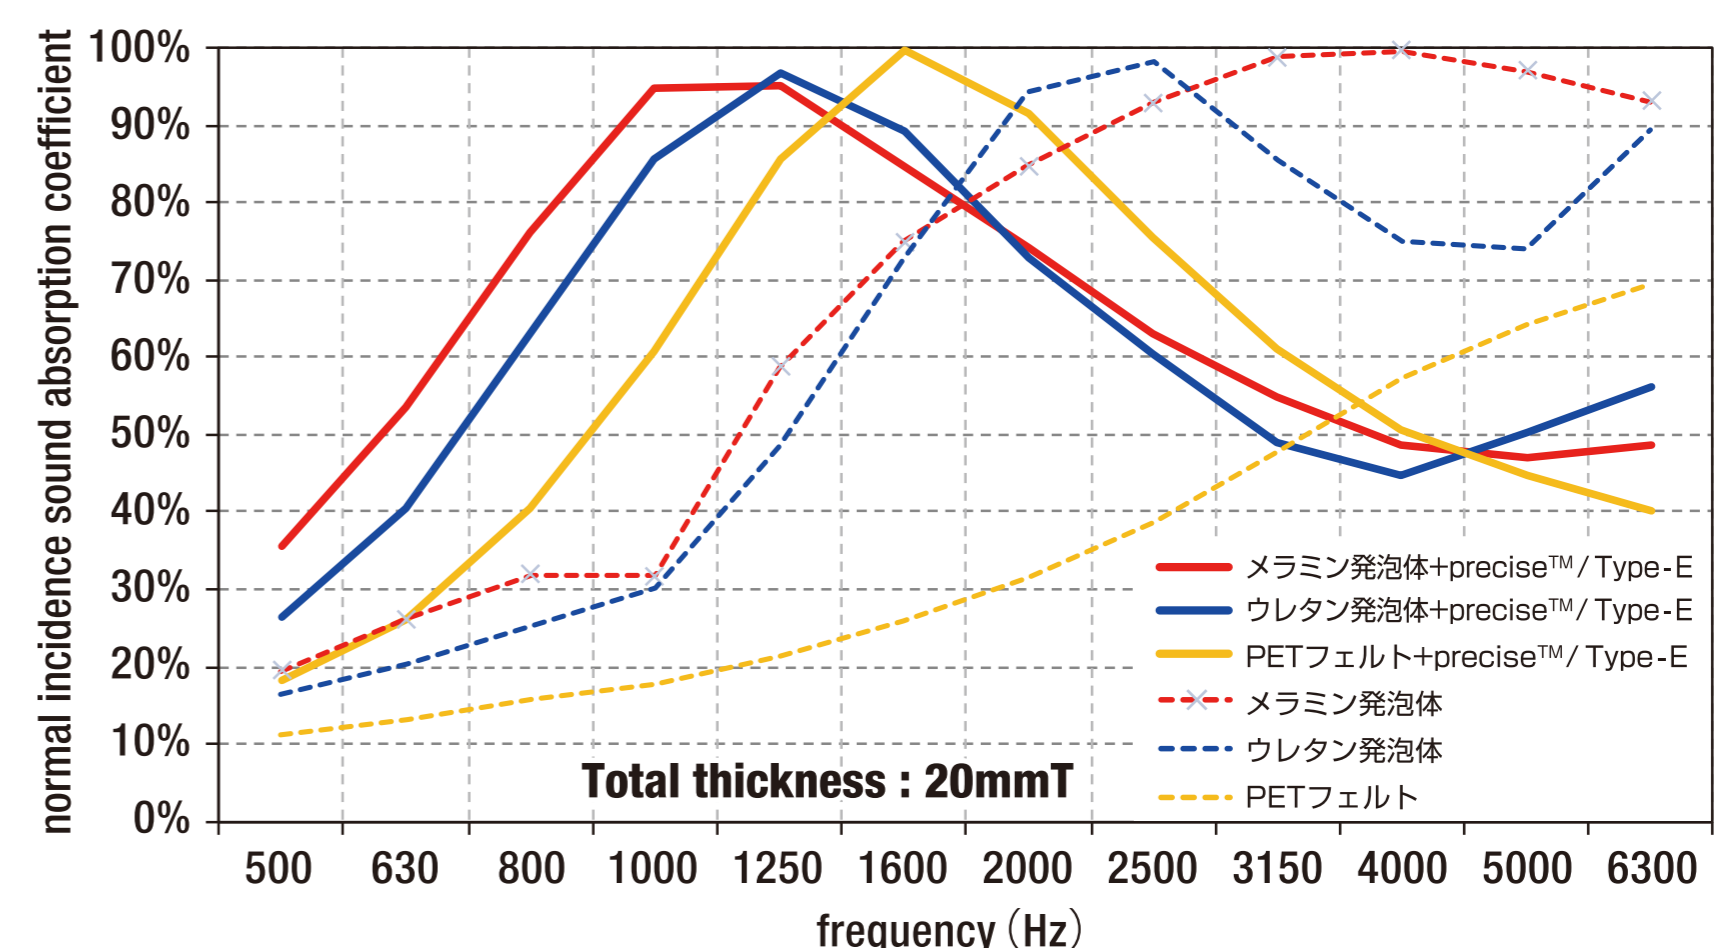

2 Precise™ can make acoustic materials thinner and lighter.

3 It's possible to change the peak of the spectrum by selecting a type of precise™.

4 Precise™ can be used for various acoustic material.

State of Progress
